

# Sequel: Impact

Visualise your total exposure in one view  
and your cross-class aggregations

## Sequel Impact

Quantify your total risk exposure in seconds with every insurable asset uploaded and enriched with external data. We see a powerful, web-based analytical engine, so that you can understand your exposure in real time.

### Visualise your cross-class aggregations

- Calculate loss scenarios in real time to see your total exposure in one view
- Integrate to data partners to utilise all information available
- See the impact of a newly quoted policy, or the projected impact of an impending catastrophe
- Overlay simulated events such as earthquakes, fires or floods onto designated geographic areas for pin-point risk analysis
- Insurable assets can be uploaded and enriched with external data, for both onshore and offshore risks

### A deeper view

#### Comprehensive data analysis

- Deterministic analysis
- Data augmentation and model integration functionality
- Imports and exports data in a variety of formats
- Flexible data recording and aggregate reporting
- Analyses any insurable risk across any business class, by any metric
- Visualise non-modelled catastrophe risk

#### Enhanced features

- Compatible with any class of business, including onshore and offshore risks
- Web-based UI
- Powerful SQL calculation engine
- Fully integrated geocoding and reverse geocoding
- Capacity consumption
- Flexible and configurable to cater for all classes of business

#### Optimising productivity

- Integrates with your existing system out-of-the-box
- Enables faster and better-informed decision-making
- Web-based, graphically rich application
- Works on any internet-enabled device
