

Digital Follow

Automated risk analysis tailored
to underwriting preferences

Digital Follow

This Solution enables the broker to access their Facility Follow capacity quickly, with minimal intervention from the broker or underwriter.

Benefits

- Data Consistency – the attraction of Digital Follow Capacity to brokers, acts as an incentive to put in the correct data, into platforms like Whitespace, which then positively contributes to the go forward evaluation and UW of the portfolios.
- Operational Efficiency – the automation of follow lines, means that the operational costs of executing a Digital Follow Solution are dramatically reduced.
- Growth – As a capacity provider, Digital Follow is a low cost means of distributing capacity.
- Allows you to attract new capacity, using data insights, when building new Broker Follow Facilities that would involve taking on the administration of the facility, this can now be augmented by the Digital Follow rules, to reduce the overhead.
- Allows for product innovation, using digital follow to create new digital consortiums and facilities.

How it works

- Broker starts in their desired input tool which then pushes the risk data into a risk on the Whitespace Platform.
- The risk then passes automatically to the underwriter instance of this organisation within Whitespace.
- When the risk hits the Underwriter instance of Whitespace, the rules within RRaaS are instantly checked to deliver a binding decision.
- The risks are then:
 - Agreed if they meet the rules of the facility
 - Auto-declined if they are outside of the rules of the facility (territory, as an example)
 - Referred for underwriting decision if necessary.
